

Log Analayzer

A simple CLI-base tool which can help you with your log analysis.

Short description:

Base features:

- Parsing *.log files.
- Parsing *.log files rolled in *.zip, but only in specific format (described below).
- Logs for analysis comes from base directory for provided path and subdirectory called "archive".
- Logs for analysis should contain *SysMonError* in file name.
- Storage history of analysed *.log files as JSON file.
- Generation of Excel document based on JSON history file.

Single log format:

Format of analysed logs (sections are cut by pipe separator):

```
[LOG|ERROR|2020 January 15, 06:35:30 (584)|TestServer|/var/log/Server_141012.log]
```

Example message

```
[END]
```

```
com.marketdata.MarketDataException: No Currency Default Set up for null at  
com.util.CurrencyUtil.getFamilyCurrencyPair(CurrencyUtil.java:7) at  
com.util.CurrencyUtil.getCcyFamily(CurrencyUtil.java:10)
```

Prerequisites

- JDK 1.7
- Maven 3.6.3

Setup project:

- settings.xml for Maven is included in /mvn_settings_runConfigs/settings.xml directory
- run configurations (supported by IDEA) are included in /mvn_settings_runConfigs/runConfigurations/*
- Maven command to make fat-jar under JDK7: `mvn -Dhttps.protocols=TLSv1.2 install clean package` or an alternative *runConfiguration* named `log_analyzer__Dhttps_protocols_TLSv1_2____.xml` under /mvn_settings_runConfigs/

Step-by-step setup:

1. Clone git/svn repository from **release/0.1** branch for latest stable version
2. Open IntelliJ and import project as Maven project -**Cancel dependency resolution if you're using custom Maven settings.xml!**
3. Open Settings and go to Maven Settings and replace/override: *Maven home directory to apache-maven-3.6.3* and *settings.xml from mvn_settings_runConfigs subdirectory*
4. Copy **runConfigurations** directory under your **.idea** directory and restart IntelliJ
5. Now you're able to run Maven goal by choosing it from run configuration list in the upper area of the IntelliJ window
6. Now your dependencies will be resolved to those defined in pom.xml and project would be packaged into target/ directory.

How to use:

Available commands:

Action	Flag	Description
Help	--help	Shows available commands as also their description and briefly information about software version.
Directory Path	--path [argument]	Specify the path to the directory to scan. In case of any whitespaces in path use double quotes.
Date From	--datefrom [argument]	Specify the date with time where log analysis should be STARTED. Format: yyyyMMddHHmmss Example: 20190125121544 for 25-01-2019 12:15:44.
Date To	--dateto [argument]	Specify the date with time where log analysis should be FINISHED. Format: yyyyMMddHHmmss Example: 20190125121544 for 25-01-2019 12:15:44.
Generate report	--report	Generates Excel report file.

Examples of allowed flag combinations:

Show help:

```
java -jar target/log-analyzer-0.1-SNAPSHOT-STANDALONE.jar --help
```

Analyse logs under provided path:

```
java -jar target/log-analyzer-0.1-SNAPSHOT-STANDALONE.jar --path "/var/logs"
```

Analyse logs under provided path where logs dates are after '--datefrom':

```
java -jar target/log-analyzer-0.1-SNAPSHOT-STANDALONE.jar --path "/var/logs" --datefrom 20101001120000
```

Analyse logs under provided path where logs dates are before '--dateto':

```
java -jar target/log-analyzer-0.1-SNAPSHOT-STANDALONE.jar --path "/var/logs" --dateto 20101201120000
```

Analyse logs under provided path where logs dates are between time interval '--datefrom' and '--dateto':

```
java -jar target/log-analyzer-0.1-SNAPSHOT-STANDALONE.jar --path "/var/logs" --datefrom 20101001120000 --dateto 20101201120000
```

Create Excel report file based on LogHistory.json file:

```
java -jar target/log-analyzer-0.1-SNAPSHOT-STANDALONE.jar --report
```

Analyse logs under provided path where logs dates are before '--dateto' and create Excel report based on LogHistory.json and current analysis:

```
java -jar target/log-analyzer-0.1-SNAPSHOT-STANDALONE.jar --path "/var/logs" --dateto 20101201120000
```

GlobalConfiguration.json:

This configuration can be found under '*resources/*' directory inside project or in JAR archive under '*BOOT-INF/classes/*'

```
{
    "logDelimiterPattern": "|#####|",
    "regexFilterList": [
        "(?<=\\[Error-ID: \\d\\d\\d\\d\\d\\d\\d\\d\\d\\d\\.)*",
        "([a-z]+[0-9]|[0-9]+[a-z])[a-z0-9]*",
        "(?s)\\{.*\\}(?=.*(\\[END\\]|$))"
    ],
    "historyFileName" : "LogHistory.json"
}
```

logDelimiterPattern - this pattern is responsible for exchange pipe operator in cut log files

regexFilterList - array of regular expressions responsible for filtering logs in every analysis

historyFileName - string which describes name of history file after analysis

Example application flows:

Request for help:

CLI input command:

```
EE55288@GUSDZ9050182 MINGW64 /c/projects/EE55288/log-analyzer (development)
$ java -jar target/log-analyzer-0.1-SNAPSHOT-STANDALONE.jar --help
```

Answer:

```
EE55288@GUSDZ9050182 MINGW64 /c/projects/EE55288/log-analyzer (development)
$ java -jar target/log-analyzer-0.1-SNAPSHOT-STANDALONE.jar --help
2020-02-11 13:35:50 [main] INFO (RunnerCLI:41) - =====

2020-02-11 14:13:03 [main] INFO (App:32) - Execution time: 00:00:00.045
```

The screenshot shows a Windows File Explorer window titled 'log'. The address bar indicates the path: Computer > (Y:) EE55288.HOME (\\P00P5002.HD00.UNICREDITGROUP.EU\\EE55288\$) > SCHOWEK > log. The left sidebar shows 'Favorites' (Desktop, Downloads, Recent Places) and 'Libraries' (Documents, Music, Pictures, Subversion, Videos). The main pane displays a table of files and folders:

Name	Date modified	Type	Size
example-log	11/02/2020 13:09	File folder	
log-analyzer-0.1-SNAPSHOT-STANDALONE.jar	11/02/2020 12:58	Executable Jar File	21,465 KB
LogHistory.json	13:09	JSON File	1 KB
LogReport_202002111312	13:13	XLSX File	5 KB

A context menu is open over the selected file 'log-analyzer-0.1-SNAPSHOT-STANDALONE.jar'. The menu options are: Open, Edit with Notepad++, Edit with IntelliJ IDEA, 7-Zip, Open with..., TortoiseSVN, and Restore previous versions. The '7-Zip' submenu is expanded, showing options: Open archive (highlighted with a red circle), Open with..., Extract files..., Extract Here, and Extract to "log-analyzer-0.1-SNAPSHOT-STANDALONE.jar".

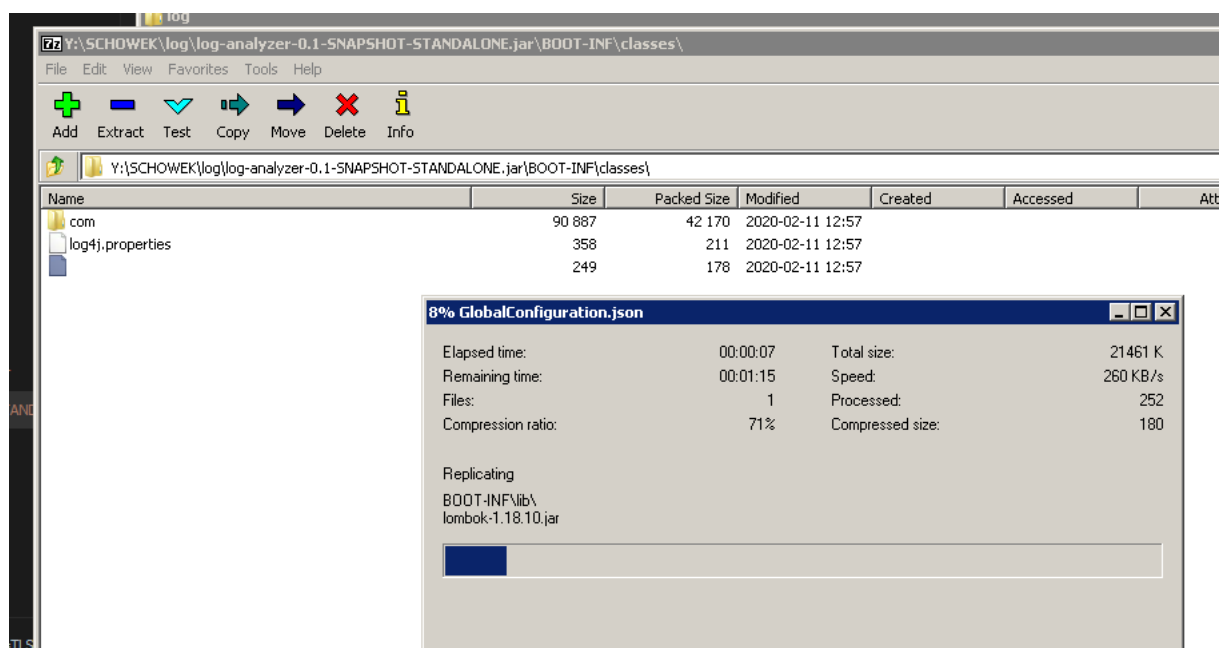

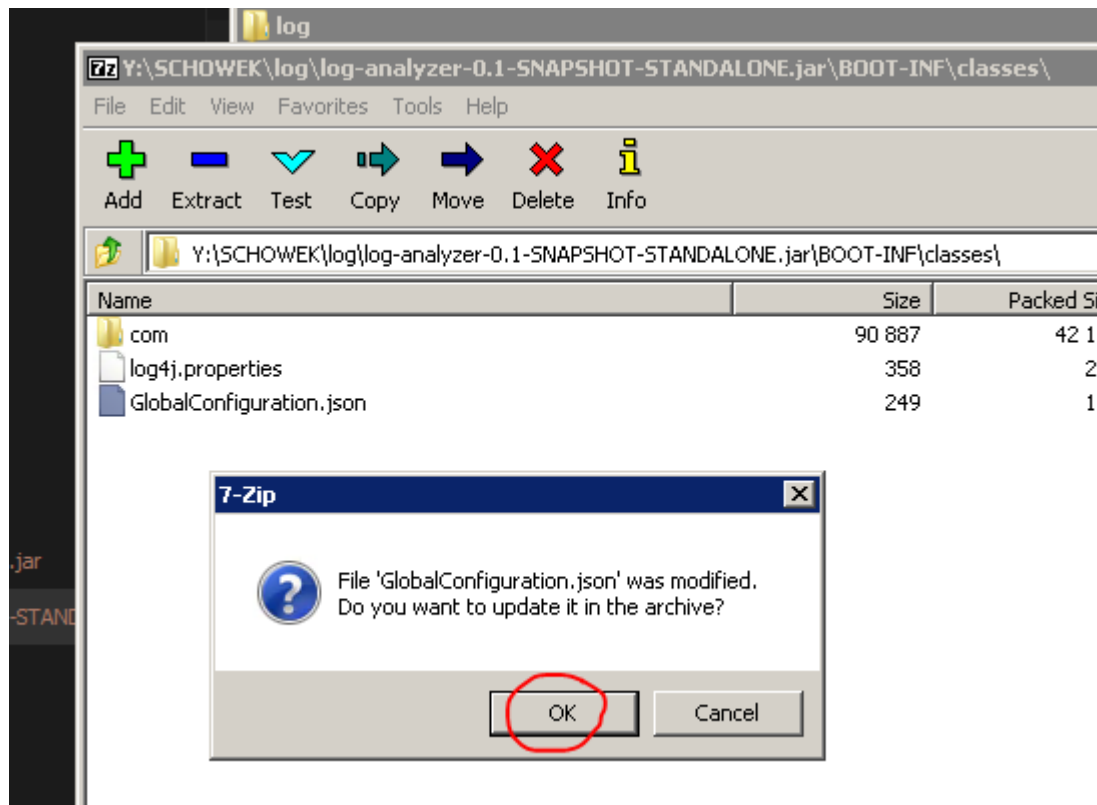

The screenshot shows a Windows Explorer window with the address bar displaying the path: Y:\SCHOWEK\log\log-analyzer-0.1-SNAPSHOT-STANDALONE.jar\BOOT-INF\classes\.

Name	Size	Packed Size	Modified
com	90 887	42 170	2020-02-11 12:57
log4j.properties	358	211	2020-02-11 12:57
GlobalConfiguration.json	249	178	2020-02-11 12:57

A screenshot of a file explorer window. The file list shows 'com', 'log4j.properties', and 'GlobalConfiguration.json'. A right-click context menu is open over 'GlobalConfiguration.json'. The menu items are: 'Open' (Enter), 'Open Inside' (Ctrl+PgDn), 'Open Inside *', 'Open Inside #', 'Open Outside' (Shift+Enter), 'View' (F3), 'Edit' (F4), and 'Rename' (F2). The 'Edit' option is circled in red.
